	DATE	May 2013

Overview

Transactions Three types of transactions may be input into FAACS.

- An **“add”** transaction is appropriate when a new asset has been acquired and is to be added to the FAACS master file.
- A **“change”** transaction is generated when a change is to be made to an existing asset record on the master file.
- A **“delete”** transaction will remove an existing asset record from the master file.

Caution: “Delete” transactions should only be used on rare occasions. Delete transactions do not leave an audit trail. They merely eliminate the asset record. A **“delete”** transaction should only be used to remove incorrect information from the master file that cannot be removed in any other way. The incorrect data will presumably be replaced by correct data.

Do not confuse **“delete”** with **“disposal.”** When an asset has been traded in, lost, stolen or transferred to DGS for sale as surplus, its master file record should not be deleted. Instead, a change transaction that modifies the asset record to include disposal information should be entered. Three years after an asset has been disposed, the record will be purged by the system. The resulting *Purged Asset Report* serves as an audit trail for the disposal process.

“Controlled” assets that are no longer needed should be “deleted” in FAACS rather than being “disposed.” Unlike “disposed capitalizable” assets that are purged after three years “disposed controlled” assets are not systemically purged and remain in FAACS indefinitely.

Key Field Information

The FAACS master file contains a 1500-byte record for each asset that is entered. Each asset record is identified by its “key” field information and is the *address* field. Three data elements comprise the key field information as follows:

- Agency number (3 characters)
- Asset Category (1 character).
1 = land; 2 = buildings; 3 = infrastructure; 4 = equipment
- FAACS ID (9 characters). This typically is or incorporates the asset’s tag number for equipment. All nine characters must be filled. If the tag number, and/or other relevant information to be included, is less than 9 characters, the left most characters should be zero filled.

Volume No. 3—Automated Systems Applications	TOPIC NO.	70325
Function No. 70300—FAACS Online	TOPIC	Data Entry/Inquiry
	DATE	May 2013

Overview, Continued

Data Elements Each record contains a uniform set of data elements. Data elements vary from one to 25 characters (or bytes) in length totaling 1500 bytes for each record. Data elements contain specified information in a predetermined format for each data element. The data elements are subject to systems edits to ensure that only properly formatted and appropriate data is contained.

Some data elements are required. An asset cannot be added to the system unless all required data elements contain valid and appropriately formatted data. The remaining data elements are optional. Most data elements are formatted to accept alpha/numeric data and are left justified. Some data elements are formatted to contain dollar amounts. These accept numeric data only in dollars and cents (with decimal) format, are right justified and are automatically zero filled.

For a listing of all FAACS data elements that includes relevant information on each, refer to *FAACS Data Elements* in this subtopic.

Systems Edits Data entered into each data element or field is subject to systems edits. This is to ensure that inappropriate data is not entered into a field. This topic includes detailed specifications for valid data to be entered into each of the data elements.

If the data is in a relevant FAACS or CARS table, an on-line table lookup is performed.

Tables FAACS is a table-driven system. A table is a file that contains only valid data elements. Where applicable, transaction data is compared to tables as part of the edit process.

FAACS tables include:

- Funding Source table
- Federal Cost Category table
- FAACS Nomenclature Code table
- Data Element Table, and
- Error Message Table.

Volume No. 3—Automated Systems Applications	TOPIC NO.	70325
Function No. 70300—FAACS Online	TOPIC	Data Entry/Inquiry
	DATE	May 2013

Overview, Continued

CARS tables include:

- CARS Descriptor tables, i.e., agency, program, project, FIPS code and cost code tables.
- CARS transaction code decision table.

The user may access FAACS tables for inquiry purposes.

FAACS Screens

Overview

Data entry and inquiry functions are accessed through the use of screens. Refer to CAPP Topic No. 70320, *System Flow*, for information on the Navigation Bars. For inquiry or input of new (add, change or delete) transactions, access the master file through the master file maintenance navigation bar. To access transactions that have been previously entered but not yet released into the nightly edit update, access the transaction file by using the transaction file maintenance navigation bar. To correct any error file items, access the error file by using the error file maintenance navigation bar. To enter summary transactions (CIP) use the summary maintenance navigation bar.

The on-line system has two basic presentations for asset records. These are the:

- Detailed FAACS asset record, and
- Summarized asset information

FAACS Screens, Continued

Detailed FAACS Asset Record

This presents one asset record at a time and includes all the data elements for the asset record. The data screen bar (top of the screen under the navigation bars) allows the user to view all data elements (Display All) or to view only the required and most used data elements (Required Data). The latter option is supplemented with an option to view only the remaining data elements (Additional Data).

The screenshot displays the FAACS web application interface. At the top, the browser title is "FAACS - Microsoft Internet Explorer provided by DEPARTMENT OF ACCOUNTS" and the URL is "https://faacs.doa.virginia.gov/". The page header shows the date "4/13/2012" and the time "5:24:33 PM". The main title is "Fixed Asset Accounting and Control System" with a subtitle "Master File View, Add, Edit, Delete". Below this are navigation tabs: "Master File Maint", "Trans File Maint", "Error File Maint", "Summary Maint", "View Tables", "Restricted", and "Other".

The main content area is titled "Record Displayed." and features three buttons: "Required Data", "Add'l Data", and "Display All". The record details are as follows:

AGENCY	ASSET CATEGORY	ID	REC CREATED	REC LAST UPDATED	PG ACTION	TRN TYPE		
151	4-Equipment	000000034	06301994	05162005	View	View

FAACS Screens, Continued

Summarized Asset Information

This presents one line of information for each asset displayed but allows up to twenty assets to be viewed at one time on a screen. The information displayed for each asset in this mode includes FAACS Key field information (agency number, category and FAACS ID), asset description, acquisition date, disposal code (if the asset has been disposed) and funding amount. The summary presentation includes the ability to click on “detail” by each asset presented to allow easy access to the detailed information for the asset.

The screenshot shows the FAACS web application interface. The browser title is "FAACS - Microsoft Internet Explorer provided by DEPARTMENT OF ACCOUNTS". The address bar shows "https://faacs.doa.virginia.gov/". The page title is "Fixed Asset Accounting and Control System" and the date is "4/13/2012". The time is "5:18:11 PM". The page content includes a navigation menu with options like "Listing/Select", "View, Add, Edit, Delete", "Trans File Maint", "Error File Maint", "Summary Maint", "View Tables", "Restricted", and "Other". Below the menu is a table titled "Records 1 - 20 of 331" with columns: AGY, CAT, ID NUM, DESCRIPTION, ACQ DATE, DISP, and FUND AMOUNT. Each row has a "[detail]" link next to the AGY column. The table contains 20 rows of asset data.

FAACS Screens, Continued

Inquiry

The inquiry function is facilitated by use of both formats. The master field can be scrolled backward and forward in either presentation.

Navigation around FAACS is accomplished by use of navigation bars (refer to CAPP Topic No. 70320, *System Flow*). Actions within the screens are accomplished by use of action buttons.

Action buttons appear at the bottom of the screens. The screen that you are in determines which ones appear. Use of the action buttons is straightforward. For example, to **add**, **edit** or **delete**, click on the appropriate button. When data has been entered, click on **“ACCEPT.”** To scroll, use **“NEXT”** and **“PREVIOUS.”**

Use of Navigation Bars

Overview

Navigation bars may be used to access FAACS for both data entry and inquiry. When using the mouse to click on a navigation bar. Several choices are offered. Generally, at least two are available.

Listing/Select

“Listing/Select” (or File/listing/select) allows the user to enter agency number, asset category and FAACS ID (key field information) for an asset. Enter as much of the key field information as necessary and click on the “**VIEW**” action button at the bottom of the screen to obtain a screen that presents summary asset information that begins with the FAACS key field information entered. If the FAACS ID is not entered, the presentation begins with the lowest FAACS ID for the category entered.

The screenshot shows the FAACS web application interface in Microsoft Internet Explorer. The browser title is "FAACS - Microsoft Internet Explorer provided by DEPARTMENT OF ACCOUNTS" and the address bar shows "https://faacs.doa.virginia.gov/". The application header includes the date "4/13/2012", the title "Fixed Asset Accounting and Control System", and the time "5:19:28 PM". A navigation bar contains several tabs: "Listing/Select" (highlighted), "View, Add, Edit, Delete", "Master File Maint", "Trans File Maint", "Error File Maint", "Summary Maint", "View Tables", "Restricted", and "Other".

The main content area displays a "Record Displayed." section with three buttons: "Required Data", "Add'l Data", and "Display All". Below this is a form with the following fields:

AGENCY	ASSET CATEGORY	ID	REC CREATED	REC LAST UPDATED	PG ACTION	TRN TYPE
151	4-Equipment	000000034	06301994	05162005	View	View

Additional fields include:

View, Add, Edit, Delete

“View, Add, Edit, Delete” (or view, edit, delete) allows the user to obtain a detailed asset record screen. The screen will present the record with the lowest FAACS ID available for the agency. The FAACS ID may be replaced with another one, if known, by keying the desired one in the FAACS ID field and clicking on the “**VIEW**” action button.

The screenshot shows a Microsoft Internet Explorer browser window displaying the FAACS (Fixed Asset Accounting and Control System) web application. The browser address bar shows the URL <https://faacs.doa.virginia.gov/>. The page title is "FAACS - Microsoft Internet Explorer provided by DEPARTMENT OF ACCOUNTS". The application header includes the date "4/17/2012", the system name "Fixed Asset Accounting and Control System", and the time "11:41:55 AM". A navigation bar contains several menu items: "Listing/Select", "View, Add, Edit, Delete", "Master File Maint", "Trans File Maint", "Error File Maint", "Summary Maint", "View Tables", "Restricted", and "Other". The main content area displays the following information:

Pending Transactions

YOU HAVE TRANSACTIONS PENDING IN THE FOLLOWING FILES:

Transaction File:

There are 261 pending transactions:

- 246 on Hold Status
- 4 Released Transactions
- 11 Incomplete Transactions

Error File:

There are no error transactions.

Summary File:

There are 29 summary transactions.

- 29 on Hold Status
- 0 Released Transactions
- 0 Incomplete Transactions

At the bottom left of the page, the user ID "FANL0005" is displayed. At the bottom right, the user ID "USERID DOARDE" is displayed. The footer contains "HELP" and "LOGOFF" buttons.

Create A New Transaction

Overview

To create a new transaction, access the master file via the **Master File Maintenance** navigation option. Choose “**View, Add, Edit, Delete.**” A basic screen that contains the first asset (lowest FAACS ID number) that your security allows will appear. If the user wants to access the detail screen of an asset and knows the FAACS ID, this may be accomplished by clicking in the FAACS ID field, entering the number of the desired asset record and clicking view.

Adding a New Asset

To add an asset, click on the “**ADD**” action button. This will clear the screen to accept data for the new asset being added. Key the data into the screen. Be sure all required fields contain appropriate data. Required fields are yellow, while optional fields are white.

While you are in the data entry mode, you will be able to access several tables that will assist in the data entry function. These are:

- FIPS code table
- Nomenclature code table
- Funding source code table

The next three screens demonstrate accessing the FIPS code table screen. The nomenclature code and funding source code tables are similarly accessed during data entry when adding an asset.

Create A New Transaction, Continued

Clicking on the “Search FIPS” bar will access the search FIPS table screen. Key in the FIPS location you are looking for (in this example, Richmond).

The screenshot displays the FAACS (Fixed Asset Accounting and Control System) web application. A search window titled "Get FIPS" is open, showing a search for "Richmond". The main application screen is visible in the background, showing a table of records with columns: REC CREATED, REC LAST UPDATED, PG ACTION, and TRN TYPE. The table contains one record with values: 04172012, 04172012, Add, and Add. Below the table are various data entry fields for asset details, including CQ MET, OWN STAT, COND, RPLUS DATE, NOMENCLATURE, P O NUM, FFY, FFM, QUANTITY, LAST INV DATE, DISP QTY, and DISPOSAL DESCRIPTION. The interface includes a navigation menu with options like Summary Maint, View Tables, Restricted, and Other. The browser window title is "FAACS - Microsoft Internet Explorer provided by DEPARTMENT OF ACCOUNTS" and the URL is "https://faacs.doa.virginia.gov/".

Function No. 70300—FAACS Online	TOPIC	Data Entry/Inquiry
	DATE	May 2013

Create A New Transaction, Continued

Click on “Search” and the relevant part of the table will be displayed on the screen.

To choose the desired code, click on “select.”

The screenshot shows the FAACS (Fixed Asset Accounting and Control System) web application. A search window is open, displaying the following table of results:

Title	Code
[select] RICHMOND CITY	760
[select] RICHMOND COUNTY	159
[select] RICHMOND DIVISION II CIRCUIT	764
[select] RICHMOND GENERAL - CIVIL	763
[select] RICHMOND GENERAL - CRIMINAL	761
[select] RICHMOND GENERAL - TRAFFIC	762
[select] WARSAW (RICHMOND CO.)	479

The main application window shows a form with various fields and a table. The table has the following columns: REC CREATED, REC LAST UPDATED, PG ACTION, and TRN TYPE. The data in the table is as follows:

REC CREATED	REC LAST UPDATED	PG ACTION	TRN TYPE
04172012	04172012	Add	Add

Data elements that have a limited number of allowable choices have drop down menus with these choices. These have default positions that are the most used of the choices.

Function No. 70300—FAACS Online	TOPIC	Data Entry/Inquiry
	DATE	May 2013

Create A New Transaction, Continued

When you have completed entering data, click on **“ACCEPT.”** If all required data was entered and was valid, you will get a message that the add was successful. If any of the required fields have been omitted or if data entered was not valid, you will get a message that the transaction is incomplete. You will get an error message at the bottom of the screen and the data element(s) that are incorrect will be highlighted in red. Go to the data elements with incorrect data and correct them. Click on **“ACCEPT”** and the message should indicate a successful outcome.

The **“ADD”** transaction has been created on the transaction file. If the transaction has a security status of release, it will be released into the nightly edit update at the close of business that day and will appear on the master file on the next business day. If the transaction has a security status of hold, it will remain on the transaction file until released by a user with a release security status.

Changing an Existing Asset

To make a change to an existing asset record, access the asset record on the master file via the **Master File Maintenance** navigation bar. If you know the FAACS ID of the asset you wish to change, choose **Listing/Select** from the **Master File Maintenance** navigation bar. On the Listing/Select screen, enter the key field information (agency number, category, and FAACS ID) for the asset you wish to access. Click on **View** at the bottom of the screen. This will bring up the summary asset information screen. The asset indicated is the first one presented. Click on **“Detail”** to the left of the asset number and the detail screen for the asset is presented.

Next, click on **“EDIT.”** This allows you to edit or make changes to the asset record. Tab to the field(s) that you wish to change. Key in your changes and click on **“ACCEPT.”** A message indicating that the transaction has been entered successfully should appear.

If invalid information has been entered, you will get a message that the transaction is incomplete. You will get an error message at the bottom of the screen and the data element(s) that are incorrect will be highlighted in red. Go to the data elements with incorrect data and correct them. Click on **“ACCEPT”** and this time, the message should indicate a successful outcome.

The change transaction has been created on the transaction file. If the transaction has a security status of release, it will be released into the nightly edit update at the close of business that day and will appear on the master file on the next business day. If the transaction has a security status of hold, it will remain on the transaction file until released by a user with a release security status.

Function No. 70300—FAACS Online	TOPIC	Data Entry/Inquiry
	DATE	May 2013

Create A New Transaction, Continued

Deleting an Existing Asset

To delete an existing asset, you must access the detailed asset record on the master file. See above directions for accessing a detailed asset record under **Changing an Existing Asset**. To delete the record, click on **“DELETE.”** You will get a message asking you to confirm your intention to delete the asset. Click accordingly using either the **“ACCEPT”** (or **“CANCEL”**) action button. You will get a message indicating that your delete transaction has been created.

The delete transaction has been created on the transaction file. If the transaction has a security status of **“Release,”** it will be released into the nightly edit update at the close of business that day and the asset will disappear from the master file as seen on the next business day. If the transaction has a security status of **“Hold,”** it will remain on the transaction file until released by a user with a release security status.

Existing Transactions Residing on the Transaction File

Editing Existing Transactions

New transactions that have been created reside on the transaction file until released into the nightly edit update. Once a transaction passes the nightly edit update, it will impact the master file. If the transaction has a security status of **“Release,”** it will be released into the nightly edit update at the close of business that day and will appear on the master file on the next business day. If the transaction has a security status of **“Hold,”** it will remain on the transaction file until released by a user with a release security status.

You may access transactions on the transaction file at any time prior to release. Transactions on the transaction file may be viewed, changed, deleted or have their status changed up until released into the nightly edit update. The transaction file maintenance function is used to handle transactions that have already been created and are waiting to be released. These may have a **“Release,” “Hold”** or **“Incomplete”** status.

To access the transaction file, choose the transaction file navigation bar. The choices offered for this navigation bar are:

- File/Listing/Select
 - View, Edit, Delete
 - Hold/release individual transactions
 - Hold/release by agency or date
 - Multiple transaction generator
-

	DATE	May 2013

Existing Transactions Residing on the Transaction File, Continued

“**View, Edit, Delete**” allows the user to bring up the detailed asset record format. This works the same way as described for the master file, except that “Add” is not an option. If you wish to make a change to a transaction file record, access the record. Click on “**EDIT**” and tab to the desired field(s). Key in the intended change(s) and click on “**ACCEPT.**”

If you wish to delete a transaction file record, access the record and click on “**DELETE.**” As is the case with deleting a master file record, the user will be asked to confirm the intention to delete. In the case of deletion of a transaction file record, the record will immediately cease to exist.

Changing Security Status of a Transaction

To change the security status of transaction file records, use **the Transaction File Maintenance** navigation bar. Two choices are offered. Individual hold transactions may be viewed and released. Choose **Hold/Release Individual Transactions** from the Transaction File Maintenance navigation bar. To change the status of a transaction, use the drop down menu to the left of the asset number and click on “**ACCEPT.**”

Multiple Transaction Generator

Overview

The multiple transaction generator is used to generate multiple add transactions based on a transaction that has been entered and is on the transaction file. This feature could be useful when many assets have been acquired with the same make and model, such as personal computers or motor vehicles. Up to 25 transactions may be generated at one time.

To use this feature, choose **Multiple Transaction Generator** from the **Trans File Maint** navigation bar. The key field information for the asset record to be replicated is entered and the number of transactions to be generated is specified.

See below for an example of the **Multiple Transaction Generator** choice from the **Trans File Maint** navigation bar. Multiple transactions can be created in two different ways as follows:
